**WILL ENERGY INNOVATION SOLVE THE
CLIMATE CRISIS FAST ENOUGH? OR,
WILL MONOPOLIES KILL ALL HOPE?**

YOUR ACTIONS WILL MAKE THE DIFFERENCE.

Green Hydrogen: The Next 10 Years

Community Choice Energy

There is one big problem the San Diego Energy District seeks to solve – removing greenhouse gases from electricity generation. In 2021, there are forces opposing this mission like the Investor Owned Monopolies of California. And remember, electric generation represents one-third of all carbon emissions. That's a big chunk. Our mission is to make the grid emission-free. This is a racial and social mission, not just environmental. The weak and marginal bear the brunt of disasters and pollution. The San Diego Energy District [provides low-income housing, residential, and commercial consultation.](#)

The War on Solar, Chapter 1

The War on Solar, Chapter 2

Investor Owned Monopolies in California have formed a cartel to end distributed energy resources like rooftop solar and microgrids so that the only source of energy is remote transmission providing the cartel a 12% ROI.

The Energy Futures Academy has launched an Emergency Education Fund for 2021-2022 to educate Californians about the ballot initiative process and what a democratically elected commission would look like. That would be an **alternative to business as usual between the Cartel and the captured California Public Utilities Commission.**

The time is now to restructure from top to bottom the regulation of energy in California. Request our Memo to Californians RE Initiative to Restructure Regulation of California Energy.
